

MARIAM KALDAS

Industrial Design Engineering Student | Graphic Design • Social Media • Product Design

✉ mariamhghk157@gmail.com ☎ +31 6 13321357 📍 Enschede, Netherlands

PROFILE

Creative Industrial Design Engineering student at the University of Twente with experience across graphic design, social media content, product development, sustainability, and human-centred design. Experienced in developing concepts from user needs and research through ideation, prototyping, visual communication, and final presentation. Particularly interested in combining strong visual design with practical, user-focused solutions.

DESIGN & CREATIVE EXPERIENCE

Social Media & Graphic Design

2024 – Present

Freelance / Personal Projects

- Create social media graphics, promotional content, and visual concepts for multiple pages.
- Develop cohesive visual identities and content styles adapted to different brands and audiences.
- Design engaging posts with attention to composition, typography, hierarchy, and visual storytelling.
- Develop creative concepts for promotional campaigns and social media communication.
- Manage and adapt visual content across different social media formats.

EDUCATION

Bachelor of Industrial Design Engineering

2024 – 2027

University of Twente

Enschede,
Netherlands

CREATIVE & TECHNICAL SKILLS

Design

Graphic Design · Product Design · Concept Development · Visual Communication · Branding · Packaging Design · UX · Human-Centred Design

Creative

Social Media Content · Visual Storytelling · Creative Direction · Ideation · Typography · Layout · Campaign Concepts

Technical

SolidWorks · CAD · Prototyping · MicroPython · Raspberry Pi Pico · Electronics · Laser Cutting · Milling · Welding

Research & Strategy

User Research · Co-Design · Behavioural Design · COM-B · FMEA · SWOT Analysis · Sustainability Analysis

Professional

Communication · Teamwork · Critical Thinking · Adaptability · Time Management · Problem Solving

LANGUAGES

English

Fluent

WORK EXPERIENCE

Nuweibaa camp sales and marketing manager

08/2026 – Present

Heaven Gate Camp

Cairo, Egypt

- Customer service and guiding them from the moment they ask about the camp till reserving with us

- Answering all the questions they have about the place, area, and other needed information
- Managed multiple tasks under pressure
- Multi-tasking in the season (summer and new year)

Crew Employee

McDonald's

2025

Woonplein, Enschede

- Worked effectively in a fast-paced, customer-focused environment.
- Developed strong teamwork and communication skills.
- Managed multiple tasks under significant time pressure.
- Developed customer service and interpersonal skills.
- Took responsibility for tasks and supported team members during busy shifts.

SELECTED DESIGN PROJECTS

Sportlife Sustainable Packaging Redesign

Sustainability Guardian Project — University of Twente

Redesigned the primary packaging of Cloetta Sportlife chewing gum with a focus on recyclability, consumer behaviour, and end-of-life.

- Developed a PP monomaterial packaging concept to improve recyclability.
- Conducted user research and a COM-B behavioural analysis to identify barriers to sustainable disposal.
- Designed interventions combining education, persuasion, incentivisation, and enablement.
- Developed visual communication including icons, packaging information, and QR-code concepts.
- Conducted user testing with 12 participants, evaluating visual appeal, purchase motivation, information clarity, and ease of use.
- Explored future scenarios toward 2035, including reusable elements and partnerships with retailers and recyclers.

Ergomotion Smart Chair

Smart Products Project — University of Twente

Designed a smart chair concept aimed at encouraging users to interrupt prolonged sitting through integrated physical feedback.

- Identified limitations of existing smartwatch-based reminders and developed a more integrated intervention.
- Designed a system using a pressure sensor, accelerometer/IMU, vibration motor, and Raspberry Pi Pico.
- Developed a 45-minute sitting timer that triggers physical feedback to encourage movement.
- Explored human-centred interaction and unobtrusive feedback mechanisms.
- Programmed the prototype using MicroPython and tested the interaction logic.

Mechanical Dart Shooter

Industrial Design Engineering Project — University of Twente

Designed and prototyped a portable mechanical dart-shooting device capable of accurately shooting darts over a 4–8 m distance.

- Developed and evaluated multiple mechanical concepts, including spring, ratchet, and winch mechanisms.
- Designed around requirements for portability, installation time, accuracy, and safety.
- Developed components using SolidWorks.
- Used manufacturing techniques including laser cutting, milling, and welding.
- Performed risk analysis and FMEA to identify potential material, joint, and mechanism failures.
- Iterated the design after testing identified issues with spring force and component availability.

Human-Centred Product Design

University of Twente

Worked on design projects involving users with specific physical needs and limitations.

- Applied empathy and user-centred design methods to understand user needs.
- Designed with accessibility, usability, ergonomics, and interaction in mind.
- Collaborated with users as co-designers during the development process.
- Translated user insights into practical design requirements and concepts.

Smart Pill Box Product-Service System

Entrepreneurship / Design Project

Developed a product-service concept addressing medication management through a combination of physical product design and supporting services.

- Explored product-service-system opportunities and user needs.
- Developed a business model around partnerships with pharmacies and insurance providers.
- Applied SWOT analysis and entrepreneurial frameworks to evaluate the concept.
- Considered affordability, partnerships, user adoption, and service delivery.

Sociale Werkplaats Co-Design Project

Developed a design solution in collaboration with a user experiencing physical limitations while assembling wooden products.

- Conducted user-focused analysis of existing activities and difficulties.
- Considered ergonomics, accessibility, and physical interaction throughout the design process.
- Used co-design principles to incorporate the user's experience directly into the design process.
- Developed a solution focused on improving usability while maintaining the user's involvement in the activity.
